Subject: Re: Fw: USA Today query about Metalico lead smelter site in Atlanta

Donna,

If I remember correctly, this was a set of three sites located throughout Atlanta, with the property located off Piedmont being the main one. I did a drive by of all three last October and noticed that two of the three were paved over and the third had a concrete plant now occupying the property. GAEPD conducted a PA at that property and I looked over the data and though they had a few hits for lead, given the site use and surrounding area (kudzu, forest, and an interstate) I felt as though it didn't warrant an RSE by us. I thought I wrote an RSE memo, but it looks like I did not. To be complete the process I can write one up and get it in the system. Sorry for the delay.

Subject: Fw: USA Today query about Metalico lead smelter site in Atlanta

Hi,

See the email below from GA EPD regarding a USA Today reporter seeking information about the Former Metalico-Evans site.

GA EPD conducted a Pre-CERCLIS Screening in the first quarter of 2010 under their PA/SI workplan for Site Evaluation. The PSA recommends Discovery and further evaluation based on potential targets and detections of metals at levels greater than 3X background using an XRF (X-ray fluorescence field screening).

It was my understanding that ERRB was to conduct a Removal Site Evaluation at the site as well. I recommended that EPD delay starting the Preliminary Assessment until the RSE was finished, but due to to EPD's already full workplan, we had also considered assigning an EPA contractor with the PA.

Jeff Crowley was the OSC assigned at the time. I am copying Tim Neal as well.
